Time Master

Time Master

Analog/Digital On-Air Clock with Logos

Time Master, from IP Solutions Ltd., is a fully featured analog/digital on-air clock with added logo insertion functionality. Time Master is a creation/insertion tool for digital & analog clocks/logos that will help you design your on-air look at an extremely competitive price. Time Master allows users to playout a full range of on-air clocks, logos, animated sequences, text, graphics & tickers; Time Master is all you need to achieve that new creative look.

Clear and Easy To Use Interface

Time Master is a Windows based application that provides a comprehensive set of tools to create, manage, and playback a wide variety of clocks, logos, text and graphic images. Commands are available to size and position any clock, logo or graphic elements on the screen and save for future recall. Saved elements are displayed in the provided asset browser allowing the operator to recall clocks & logos by clicking on the graphic or by recalling using the supplied dedicated control panel. Designed to make the operator's life easy, Time Master's simple to use interface minimizes the chances of on-air mistakes. For automated applications, Time Master supports automation Intelligent Interface commands so control from your automation system is a simple task.

Applications:

- Live Control Rooms
- Master Control Rooms
- Remote Production Trucks
- News Studios

Features:

- Easy to learn and use
- Digital Style Clocks
- Analog Style Clock
- Text Insertion
- Date & Time Insertion
- Animation Logo
- Unlimited storage capacity
- Compact 1RU chassis
- Base on broadcasting quality hardware for superb picture quality
- 525 and 625 line standards
- Delivered fully tested and integrated with Windows XP

Time Master supports Static and Animated Logos

Time Master supports an unlimited number of static and animated logos. Animated logos are flipbook animations that are played back in real-time. Flipbook animations are easy to create using inexpensive software tools that are commonly used in graphics departments. Once imported, logos can be placed anywhere on the screen and can be combined with static graphic elements as well. When complete, the logo with all of its setup parameters can be stored on the hard disk for future recall.

Text and Tickers

What sets Time Master apart from other systems is the ability to add text and automated tickers to your on air logos. Text elements can be used in conjunction with other graphics or by themselves. Tickers provide a way to automatically update onscreen text with data coming into Time Master from either Ethernet or RS232 connections. Time and temperature are just two examples of how this function could be used. Why tie up your expensive CG when Time Master can do it all.

Superb Picture Quality

The architecture of Time Master is an uncompressed 4:2:2:4 signal path. Playback of all clocks & logos are done using a high performance graphics card. Picture and key outputs are provided to feed your switcher directly or the graphics card provides a 10 bit linear keyer so Clocks & logos can be inserted downstream from your switcher.

All Systems Include:

- 1RU chassis
- GPI Interface
- Intelligent Interface protocol
- Serial ATA 120GB hard drive
- CD writer with software

Options Include:

- Recall Keyboard
- Additional storage
- Internal clip player
- Text and Tickers (Crawls)

Graphic Cards Include:

- 10 Bit signal performance
- Video and key output
- High quality digital keyer
- Analog Preview

Service and Support

All Time Master configurations are fully integrated and tested solutions that are built to order. Only the Latest technology is used to ensure high quality and long service life. Training and support can be arranged through IP Solutions Ltd.
